Subject Answers to your Seaford questions...

Hi, Bob. The answers to the questions you asked me today during our phone call are as follows:

1. Ash from Landfill (SWMU 17) reused on the Golf Course project = 382,477 cubic yards.

The Plant reported this number as part of their DNREC Solid Waste Permit, so it should be a fairly reliable number. If you need it in tons, I think 1.1 ton/cu yd is a reasonable conversion, so it is 420,724 tons.

2. Groundwater removed by Well PW-2A and PW-8 (area of SWMU 1) = @800,000,000 million gallons total.

This pumping was under an "Interim Measure" under the Order for a four year period.

The total groundwater removed is based on these pumping rates: [70mg (PW-2A) + 130mg (PW-8) = 200mg x 4yr = 800mg total].

The yearly volume of water pumped at the two wells varies, so the 70mg and the 130mg are an average for the four year period, so this number is not quite as reliable as the ash number.

Please feel free to call me if you have any additional questions. Regards,
Matt Brill, PG. (302 892-7576 direct).
